

## What are Databases?

## WENED TO SAVE INFO...

– Maybe files?

## WENED TO SAVE INFO...

- Maybe files?
- Too big and hard to retrieve and modify data

## WENED TO SAVE INFO...

- Maybe tables?
- Then we will have organized collection of structured information

## SO DATABASES ARE...

 organized collection of structured information, or data, typically stored electronically in a computer system.

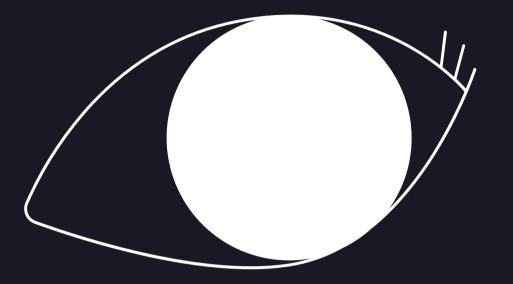

A database is usually controlled by a database management system (DBMS).

Together, the data and the DBMS, along with the applications that are associated with them, are referred to as a database system, often shortened to just database

## STOP! BUT THIS IS MY GOOGLE SPREADSHEET \*\*

#### DB'S VS SPREADSHEETS

- Strict data writing and updating via data types
- Multiple updates at a time
- More solid foundation
- range of complexity in terms of data manipulation via SQL

#### STRUCTURED QUERY LANGUAGE (SQL)

— is a programming language used by nearly all relational databases to query, manipulate, and define data, and to provide access control

### DATABASE TYPES AND DIFFERENCES

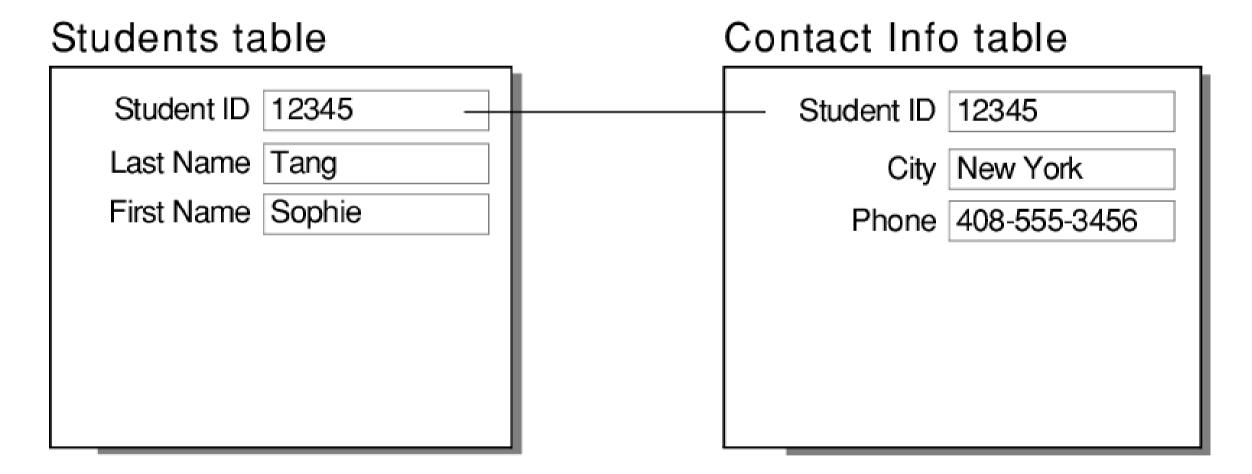

- Relational databasesPostgreSQL, MySQL
- NoSQL
   MongoDB, AWS Dynamo, Firebase Realtime / CloudStore
- Graph databasesAmazon Neptune
